

Install TreeAge Pro on Client Machines for Authorization via TPNLS

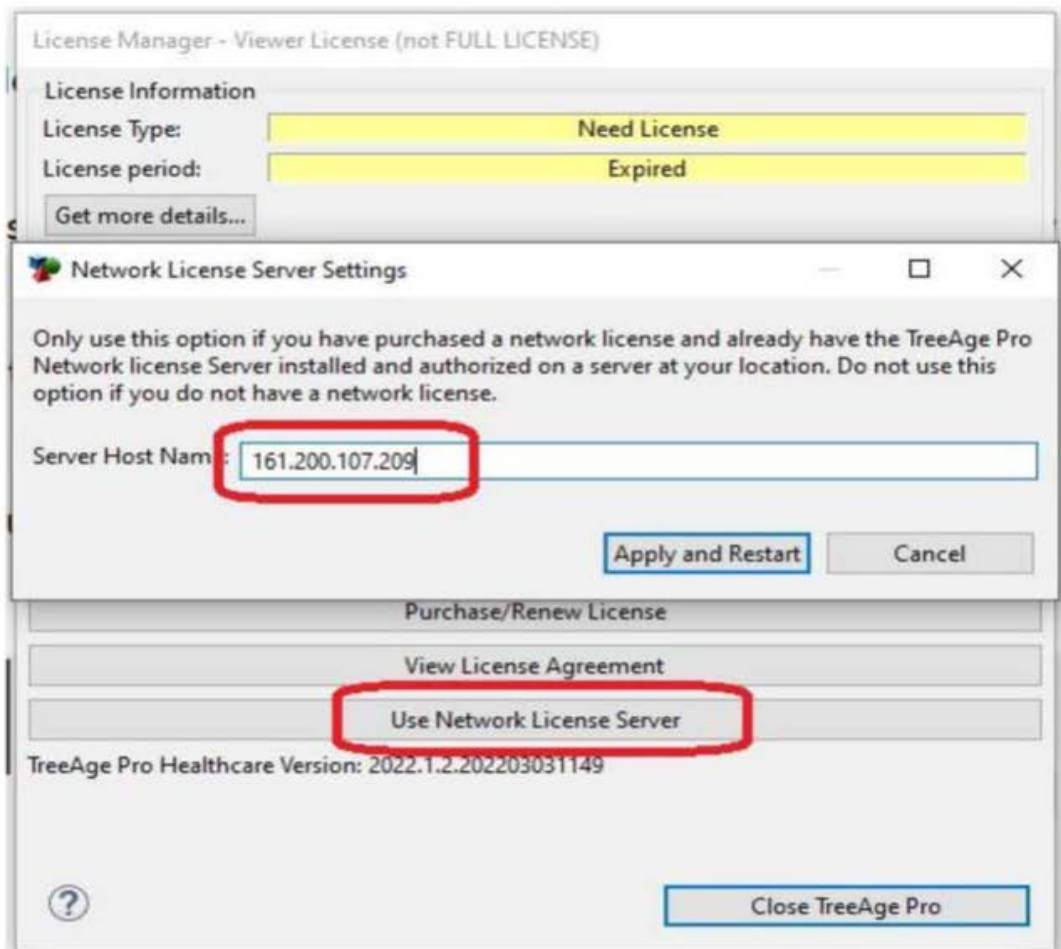

Before installing TreeAge Pro, download and install the Cisco AnyConnect VPN Client program from

http://it.md.chula.ac.th/index.php?option=com_content&view=article&id=32&Itemid=76

and login to connect at vpn.md.chula.ac.th

Install TreeAge Pro on Client Machines for Authorization via TPNLS

1. Run the installer. Use all defaults.
2. TreeAge Pro will automatically start and the License Manager will open.
3. Click the button at the bottom "Use Network License Server".
4. Enter server hostname: 161.200.107.209

5. TreeAge Pro should restart and be authorized from TPNLS.
6. Choose Help > TreeAge License Manager to check the connection to TPNLS. You should see the server name and the expiration date for the license.
